To whom it may concern

UNIFY Solutions (UNIFY) is a global company that is entirely and solely focused on Identity and Access Management and Security. We bring international ICT Security focus to New Zealand as well as international business and local employment.

We recently supported and participated in the post graduate mentoring program of the Wellington ICT Graduate School. During this process we committed our resources to four post graduate students who were from the following competencies

- Master of Professional Business Analysis
- Master of Software Development
- Master of User Experience Design

Unfortunately, one of the graduates was unable to attend for personal reasons. I had the good fortune to have previously met Alexander, a very talented ICT individual not yet out of college. I approached Alexander and invited him to test his capabilities against University Degree students. He accepted the offer and began the program.

During his time with UNIFY, he was tasked with the following engagement and assignments in the mentoring program:

- Meet the executive, solution architecture, development, service delivery teams and a graduate.
- Deliver a presentation on the most important subject, Himself
- Deliver a high-level presentation based on research and study of the ITIL framework
- Complete an assignment to understand Alexanders skills on Architecture, Design, Development and Testing.
- This assignment had been divided in 2 Parts - 30 minutes to present the assignment.
- Part A had to be delivered as a Presentable document
- Part B would be a development task, a small Mobile App to be demonstrated in 5 minutes.
- Closing with 10 minutes for any Q & A

Alexander not only delivered all the tasks with professionalism and knowledge. His final presentation exceeded the expectations of the group in his strategic thinking, work ethic and commitment to the task. The artefacts presented to our group included architecture and design, programming, development design and the proof points of his testing strategy as well as a demonstration of his prototype.

Alexander has started his degree at University and we wish him all the very best in academic studies, your future looks bright. We would highly recommend Alexander to an employer and should you require a reference in the future, we would be happy to make time available to discuss your capabilities.

All the very best at University.

Kind Regards

Tony Temaru
